KALEB UDUI, JR.
Minister

Message from the Minister of Finance

I am pleased to present the 2020 Statistical Yearbook of the Republic of Palau, which is written and published annually by the Bureau of Budget and Planning under the Ministry of Finance. Information provided in this yearbook is collected, compiled and generated in close cooperation with relevant government ministries and agencies, as well as semi-government agencies, private institutions and the community.

This annual statistical yearbook features key socio-economic data, particularly relevant statistics collected from the public and private sector and compiled for the purpose of providing a basis for economic development planning, policy development, investment planning and decision-making. This statistical yearbook is not only important for the national and state governments to guide their development planning and decision-making processes, it also provides the basis for individual investors and corporate groups to analyze and understand specific market conditions, in connection with prevailing economic forces in the Republic of Palau. This yearbook is also used by individuals, community groups, regional and international organizations that are interested in assessing specific components of the economic and social sectors.

The government, especially the Office of Planning and Statistics of the Bureau of Budget and Planning, continues to build its capacity to produce more relevant disaggregated statistics that are necessary for planning and policy formulation, in line with regional and international obligations and strategies. On-going efforts are underway to train existing personnel to advance their skills and abilities, enabling them to produce more reliable, accurate and informative yearbooks on a timely basis. To further enhance this effort, relevant ministries and agencies are encouraged to continue to cooperate with the Bureau of Budget and Planning in the collection and compilation of statistical data.

Finally, I wish to recognize the efforts of the staff in the production of this yearbook, particularly those in the Bureau of Budget and Planning who collected data and put together this yearbook, and those from other relevant ministries and agencies that provided the data. I also wish to extend my appreciation to the readers of this yearbook and hope that it will be of great assistance in providing the information you need for your research and projects. Any comments or suggestions are welcomed for the improvement of this Statistical Yearbook. Inquiries may be directed to the Bureau of Budget and Planning, Ministry of Finance.

Mesulang,

Kaleb Udui, Jr.
Minister of Finance
Republic of Palau

ACKNOWLEDGEMENTS

The 2020 Statistical Yearbook publication was made possible through the support of many government agencies as well as some enterprises in the private sector. The information contained in this publication will provide the baseline data required and other information beneficial to the private sector, national and state governments, and regional and international organizations.

The Statistical Yearbook is an annual publication of demographic, economic, social and housing characteristics. It serves as a summary of aggregated statistics about the Republic of Palau, and a reference for planners and many other groups of people for planning and implementing activities concerned with the development of our nation.

We acknowledge and are very grateful for the effort of the government agencies and other individuals in making this publication possible. We commend the staff of the Office of Planning and Statistics for their continued effort in the compilation of this publication.

INTRODUCTION

The Republic of Palau became an independent nation on the 1st of October 1994 with the implementation of the Compact of Free Association between Palau and the United States of America. The Republic of Palau consists of 16 States, namely: Kayangel, Ngarchelong, Ngaraard, Ngardmau, Ngiwal, Ngaremlengui, Ngatpang, Melekeok, Aimeliik, Ngchesar, Airai, Koror, Peleliu, Angaur, Sonsorol and Hatohobei.

The Islands of Palau stretch from about 2 to 8 degrees north latitude and 131 to 134 degrees east longitude. Palau covers 189 square miles of land area including the rock islands. The surrounding sea area includes an exclusive economic zone extending over 238,380 square miles. The capital of Palau was relocated to Ngerulmud, Melekeok in 2006. Koror remain the economic center for Palau, with a land area of 22 square miles where two thirds of the population resides. Koror lies just south of Micronesia's second largest island, Babeldaob, which contains approximately 140 square miles of undulating forests, grasslands, rivers, waterfalls, wetlands, mangroves and some of the most beautiful stretches of beaches.

Palau consists of more than 340 islands, with only fourteen being inhabited. These are, from Northeast to Southwest: Kayangel, Babeldaob, Koror, Ngerkebesang, Malakal, Ngerchong, Ngercheu, Peleliu, Angaur, Sonsorol, Pulo Anna, Merir, Hatohobei and Helen's Reef. Most of the islands are of volcanic origin, and others are of raised limestone. Babeldaob is the largest island, making up eighty percent of the total land area. Babeldaob Island consists of ten states, namely Ngarchelong, Ngaraard, Ngiwal, Melekeok, Ngchesar, Ngardmau, Ngaremlengui, Ngatpang, Aimeliik and Airai.

Palau's distance to major cities in nautical miles: Guam (710 miles), Hong Kong (1,504 miles), Honolulu (2,960 miles), Manila (916 miles), San Francisco (2,954 miles), Shanghai (1,615 miles), Sydney (2,659 miles), Tokyo (1,719 miles). The Republic of Palau is nine hours ahead of Greenwich Mean Time and is in the same time zone as Japan.

Sources: 1995, 2000 & 2005 Censuses, table 7, 2012 Mini Census Table 3 & 4, 2015 Census Table 7

Notes: (1) Population per household is the number of persons in households divided by the number of householders.

(2) Population per family is the number of (related) persons in families divided by the number of family householders.

(3) Persons in families exclude non-family householders and non-relatives

(4) Other relatives refer to any household member related to the householder by birth, blood, marriage or adoption.

(5) Persons not living in households are classified as living in group quarters of institutional and non-institutional types.

(6) In the 2012 Mini Census, Householder was not disaggregated by Family & Nonfamily householder

Total Fertility Rate (TFR)	**2.33**	**1.83**	**2.02**	**2.23**	**2.21**

Sources: 1995, 2000 & 2005 Census & 2012 Mini Census; Bureau of Public Health, Republic of Palau

Note: (1) Age Specific Fertility Rate is the number of births in a year to mothers of a specified age per woman of the same age.

(2) Total Fertility Rate represents the average number of children a group of women of child-bearing age would have by the end of their reproductive years.

(3) (*) Computed based on registered live births for Jan-Dec, 2000 & 2005.

Table 2.9 Dependency Ratio: 1995, 2000, 2005, 2012 & 2015

Age Group	1995	2000	2005	2012	2015
Total	**17,225**	**19,129**	**19,907**	**17,501**	**17,661**

No. of Classrooms	19	19	19	19	19
No. of Teachers	19	21	21	20	18
No. of Asst. Teachers	19	17	17	27	19

Source: Palau Community Action Agency's Head Start Program, Republic of Palau
Note: There are 19 Policy Council Members representing each Center and various relevant agencies. There are no Head Start services to these States due to less number of children: Kayangel, Angaur, Sonsorol & Tobi. Ngardmau consolidated with Ngaraard; Ngchesar & Ngiwal consolidated with Melekeok: and Aimeliik & Ngatpang consolidated with Ngeremlengui
Note: 6 pre-schoolers were added to 2017-2018, but not in Head Start. 4 in Angaur and 2 in Kayangel were combined with the respective elementary schools as their numbers is too low so no Head Start program for these 2 states.

Infant Mortality Rate	12.2	36.5	18.0	29.4	16.5	22.6	11.7	18.9	18.9
Fetal Deaths*	3	2	3	4	7	2	3	3	5

Source: Bureau of Public Health, Ministry of Health & Planning Office, Ministry of Finance, Republic of Palau

* Data on fetal deaths during include abortions.

Notes: (1) Population for 2012 and 2015 are Census figures

(2) Crude birth rates and crude death rates are the numbers of live births and deaths per 1000 population.

(3) Infant mortality rate is the number of infant deaths under one year of age divided by the number of live births occurring that year; it is shown as per thousand live births.

(4) For Population of year 2013 & 2014: Rough estimate in the absence of migration data. Rate derived from current census minus previous census divided by the number of years in between.

2019 State of the Environment

Report Summary & Highlights

National Environmental Protection Council (NEPC)

April 2019

Introduction

This 2019 State of the Environment (SOE) Report conveys trends of key natural resource and human response indicators through time, and analyzes their most recent conditions and grades in relation to local and global goals and standards. Where possible, it assigns a Condition or Grade—Good to Poor—and uses a color-coding system to convey whether indicators are healthy. It applies the same color codes to show if a trend is beneficial or harmful to the environment or human/environmental health. This 2019 SOE follows up on the 2017 SOE, and was reorganized to include State, Pressure, and Response to key marine, land, and urban habitats and sectors. High-level indicators include several sub-level indicators that were assessed for Condition (natural features), Grade (human responses), and/or Trend. Climate change and Invasive Alien Species are addressed as pressures in multiple sections; Protected Areas are reported on as a response (separately for marine and terrestrial habitats). Quantitative information is included for most indicators.

Summary

114 high level indicators were assessed. 91% (up from 82% in the 2017 SOE) had adequate information to assign a condition, grade, or trend.

Marine: 62 high level (305 sub-level) marine indicators were assessed. 55% of indicators were in good or fair condition or had a healthy trend; this is a decrease since 2017 in part to increased information and declining nearshore fisheries.

Terrestrial: 24 high level (98 sub-level) terrestrial indicators were assessed. 75% of indicators were in good or fair condition or had a healthy trend; this is an increase since 2017 due both to new information and successful initiatives.

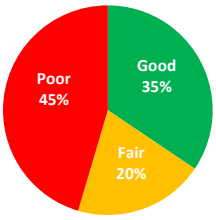
Protected Areas: Protected Areas indicators were revised significantly. 8 high level (62 sub-level) marine, mangrove, terrestrial, and bird indicators were assessed. 84% had a good or fair grade; but 16% were poor (the 2017 SOE had 100% good or fair, prior to revisions).

Human/Urban: 26 high level (78 sub-level) human/urban indicators were assessed. 72% of indicators had a good or fair grade or a healthy trend; this is the same as in 2017.

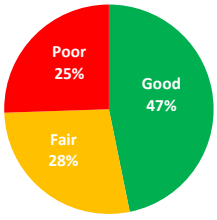
Coral Reefs

Most shallow coral reefs are healthy and in good condition. Shallow reefs on the East Coast and deeper reefs (newly addressed in the SOE) are not in such good condition. Many of the pressures on coral reefs are intense and getting worse. Global climate change has immediate negative impacts on coral health. Local pressures (such as sedimentation onto reefs) are not well understood. Palau has responded well to the pressures facing coral reefs, and continues to improve its response. Continued investment in Marine Protected Areas (MPA) (particularly State's commitments to create new ones), means that only lagoons and reef flats are still poorly represented in Palau's network of MPAs. Responses to local pressures have been very slow and should be improved, particularly reducing sedimentation and overfishing of reef fish.

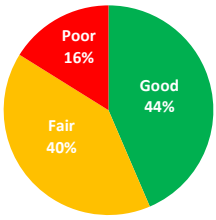
Summary of Marine Indicators



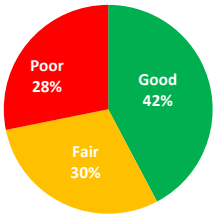
Summary of Terrestrial Indicators

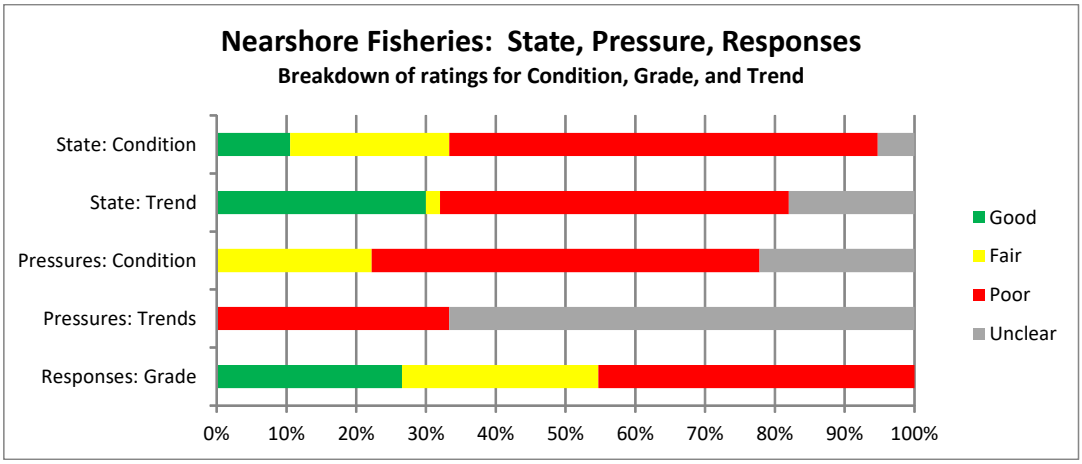


Summary of Protected Area Indicators



Summary of Human/ Urban Indicators





Figure, left. The Nearshore Fishery sector is in trouble, with many species (fish and invertebrates) at risk of population crash. The Nearshore Fishery sector needs immediate, coordinated, direct, and socially inclusive responses. Many new sources of information were analyzed; across 186 sub-level indicators, only 20% were Good and 18% were Fair. 52% of indicators were Poor and 10% were Unclear.

Nearshore Fisheries

The vast majority of indicators for nearshore fisheries are in Fair to Poor condition, and getting worse (see Figure, above). There are many unknowns. Several species are at risk of a population crash (either locally or widespread). It also appears that invertebrates have been overfished (either locally or widespread). Pressures on Nearshore Fisheries come from local stressors as well as climate change. Palau's response to Nearshore Fisheries has been inadequate. Investment in MPAs has yielded some good results, but it is not enough. The majority of reef fishery resources are not protected via MPAs or rules and regulations (see Table below), and there are key gaps in knowledge. Alternatives to nearshore fishery use, such as aquaculture and offshore fisheries, are not adequate to reduce pressure on nearshore fisheries. Palau's National Government has invested relatively little time, effort, or money into managing Nearshore Fisheries. Information on nearshore fisheries is thus widespread and at times, conflicting. Palau must improve its approach to Nearshore Fisheries with a comprehensive, coherent response, using the coordinated strengths of multiple actors; as it does with coral reefs. This response must also be gender and socially inclusive (e.g. not just focus on reef fish).

Offshore Fisheries

Palau's Offshore Fisheries are in Fair condition, in relation to stock assessments for the entire Western and Central Pacific, and appear to be improving. Pressures from climate change are expected to get worse; there is much that is unknown. Palau's overall response has been good. See Figure, next page, for trends in vessel numbers, especially given the PNMS.

Select Marine Species and Sites

In general, several marine species and sites have unhealthy trends and are getting worse. There is a lack of knowledge or monitoring programs for most marine sites and species, which limits understanding of and responses to pressures. Jellyfish Lake and its unique species are well understood and monitored. Most marine species and sites discussed in the 2019 SOE have some sort of regulation or law applied, even if inconsistently. However, compliance and enforcement must be strengthened to stop population decreases and reduce pressures.

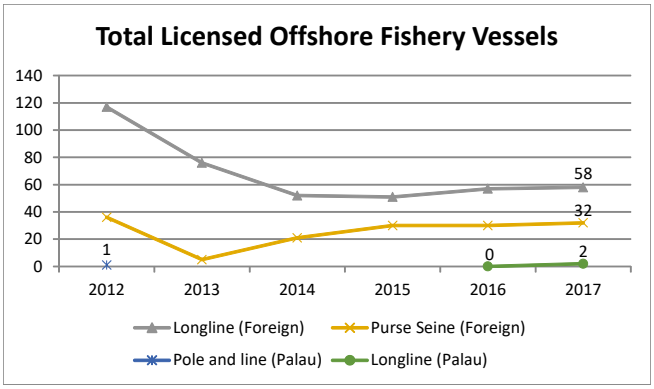
Mangroves

Mangroves in Palau appear to be healthy and resilient. However, a sizeable portion of mangrove was cleared for development in 2016-2017. Over the long-term, mangroves have expanded enough to overcome losses from construction of the National Highway; however the impact of that growth (e.g. on rarer habitats such as seagrass) remains unknown. While baseline information on mangroves is good, there have been few follow-up studies to determine if baselines have changed. New work is ongoing to quantify carbon storage and trends. Palau's Carbon Stocks are relatively high. Human use and clearing is the greatest pressure facing mangroves, impacting large areas of mangrove at a time. 33% of mangroves are managed in some way, although given the importance of mangroves to food and climate security, the target for management is 75%. Mangrove MPAs appear to be performing well. Palauan government leadership on mangroves (including a central source for information) remains a gap.

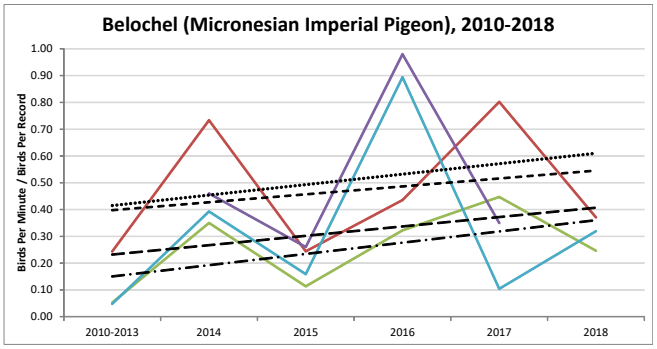
Table, below. Overview of how many and types of laws and regulations that apply to fish and invertebrates. Most species are not well regulated.

	State (Number of Species and Percent of Species Regulated) and Grade[1]						
Type of Fishery	*Gear restrictions*	*Seasonal closure, Limited open*	*Complete closure*	*Export ban*	*Size limit[2]*	*Catch Limit*	*Number under multiple reg's[3]*
Top fished species (19 fish species)	19 species 100%	3 16%	2 11%	3 16%	2 11%	0 0%	5 26%
Macroinvertebrates[4] (4 invertebrate types)	4 types 100%	1 25%	0 0%	2 50%	2 50%	0 0%	1 25%

[1] Green = Good; Yellow = Fair; Red = Poor.
[2] Does not consider 3-inch minimum size net.
[3] E.g., at least 2 regulations (at least one other restriction, law, or regulation that is species- or type-specific, beyond gear restrictions).
[4] 4 types: Sea Cucumbers, Trochus, Clams, Crabs/Lobsters.



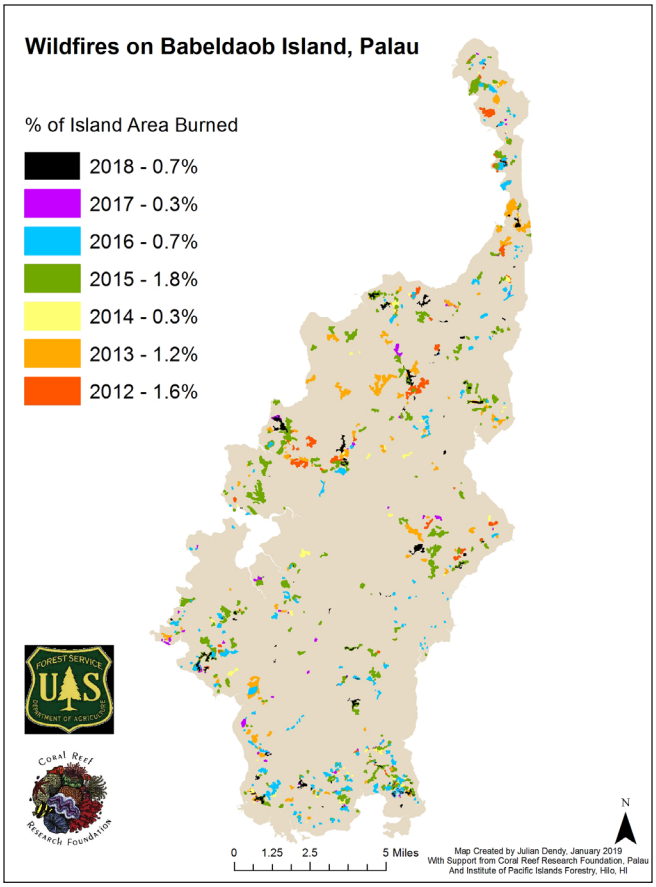
Figure, top. Total Licensed Vessels, with new domestic vessels.



Figure, top. Belochel may have increased in population. Many bird indicators are good.

Forests

With the exception of burned areas, forests are in Good condition, with high diversity. Extent of forest expanded, although this is secondary vegetation. However, trends indicate that the extent of damaged and degraded lands and forests, and the number of damaged trees, is increasing. There is little public data on freshwater resources or biodiversity. Fire (see Figure below) and climate change pose significant threats to forests and freshwater. Invasive Alien Species (IAS) seem to be better controlled on land and Palau has implemented measures to reduce their threat. There is little information on human use of forests or freshwater biodiversity. Extent of Terrestrial Protected Area has increased but is still too low. Performance of Terrestrial Protected Areas is Fair to Good for socioeconomic indicators, but unknown for biophysical indicators. Information on endemism, distribution, and status of terrestrial plants has increased significantly. However, many plant species are now known to be threatened or endangered, and few are managed outside of Protected Areas.



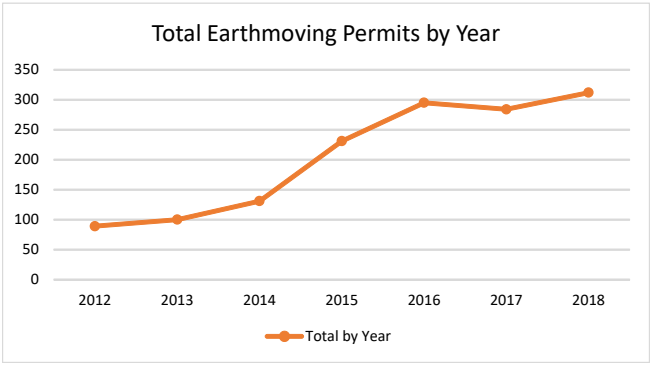
Figure, above. Map of fire occurrence on Babeldaob Island, Palau from 2012 to 2018. Figure from Dendy et al. (2019).

Birds

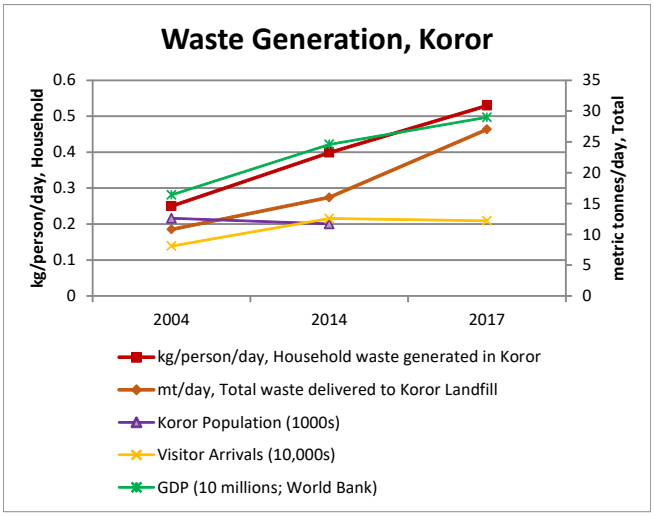
Birds appear to be doing well, with the significant investment in birds over the past decade leading to improved Conditions and Trends for key species. Bird diversity is good, and Belochel (see Figure above), Biib, and Bekai appear to have increased. However, Melabaob has decreased. Birds are vulnerable to multiple pressures. While climate change is a threat to birds, the majority of pressures on birds comes from humans. Palau's many excellent programs for birds have resulted in improving Conditions. However, there is inadequate Protected Area for birds, and key shorebird sites are not protected. Data access is good, but data are not always standardized or analyzed.

Earthmoving and Development

The number of permits issued continued to increase (see Figure below), although this number includes changes to existing structures (e.g. renovations or improvements). Both the number of violations and the violation rate increased, which may be due to increased legal capacity at EQPB or to rapid growth. The majority of development is permitted without a formal Environmental Assessment (EA) or Environmental Impact Statement (EIS). The majority of hotel development/ construction since 2012 has been small/niche. EQPB continues to review and revise its regulations. In 2017, no (0) states had comprehensive landscape and seascape plans in place; only 4 of 16 states have partial plans or some zoning.



Figure, above. The number of Earthmoving Permits was at an all-time high in 2018.



Figure, top. Total waste generated nationally and by household, compared to Koror's population, visitor arrivals, and GDP.

Water Resources

Treatment of drinking water (in terms of supply and quality) is good. Drinking water in the urban areas of Koror and Airai meets standards for Turbidity and E. Coli always. Water in urban areas sometimes exceeds standards for total coliform, and water in rural areas exceeds turbidity and coliform standards regularly. Water supply is good on an annual basis, but supply varies dramatically with extreme weather. It appears that total use (and waste) may have decreased since 2010. Palau's drinking water monitoring program is excellent. However, there is inadequate monitoring or information on marine and freshwater resources. Access to treated water and access to sanitation are almost 100%. Improvements to water and wastewater infrastructure are likely contributing to decreased average fecal coliform and turbidity; and to decreased water use and waste.

Solid Waste and Recycling

The amount of total waste generated is increasing (see Figure above), at pace with GDP. The increase in total waste generated is outpacing programs to reduce, reuse, or recycle waste. Although solid waste programs are good, with collection in 100% of Koror's residential areas, and numerous recycling programs, they are not able to keep up with the amount of solid waste produced. The total amount of waste recycled or composted increased, but as a proportion of total waste generated, it decreased. Increasing composting would divert significantly more waste. The Beverage Container Deposit and Redemption Program has successfully diverted most beverage containers from the landfill.

Agriculture

Agricultural production and participation has increased. However, there is little tracking of production, and growth appears too slow to meet demand and targets. Facilities to serve the agricultural sector have expanded, including opening of the National Slaughterhouse, identification of and support for Best Practices, expansion of agro-forestry with nursery trees, and control and removal of IAS (including vines and fruit flies).

Energy Sector and Transportation

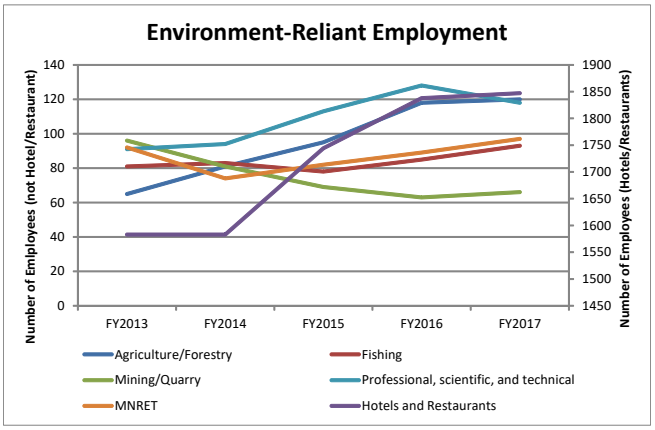
Renewable energy and Energy efficiency both increased, but at a pace that is inadequate to meet goals. Total energy consumption increased drastically, reducing the proportion of renewable energy produced and consumed. Car imports appear to be decreasing.

Awareness and Capacity

Public awareness of environmental and conservation issues remains high, although may have decreased due to a shift in approach to targeting key stakeholders. The growth of PAN and the introduction of new initiatives (such as the Sustainable Tourism Framework) have brought many new people (in need of training) into the environment sector.

Gender and Social Inclusion

Several initiatives (e.g. Land Use Planning and Protected Areas Management) have the potential to have negative, unintended consequences on genders or social groups. The Environment Sector/Conservation Community has begun applying a Gender and Socially Inclusive Lens to projects and initiatives. Mainstreaming is being included in National Projects; baseline data has been established.



Figure, top. Employment in sectors that are reliant on the environment.

Key to Color Codes

Condition or Grade: Good/Healthy.
Trend: Beneficial to the environment.

Condition or Grade: Fair. Improvement is needed.

Condition or Grade: Poor/Not healthy.
Trend: Harmful to the environment.

Condition or Grade: No grade assigned, or Unknown.
Trend: No clear trend, or Baseline.
