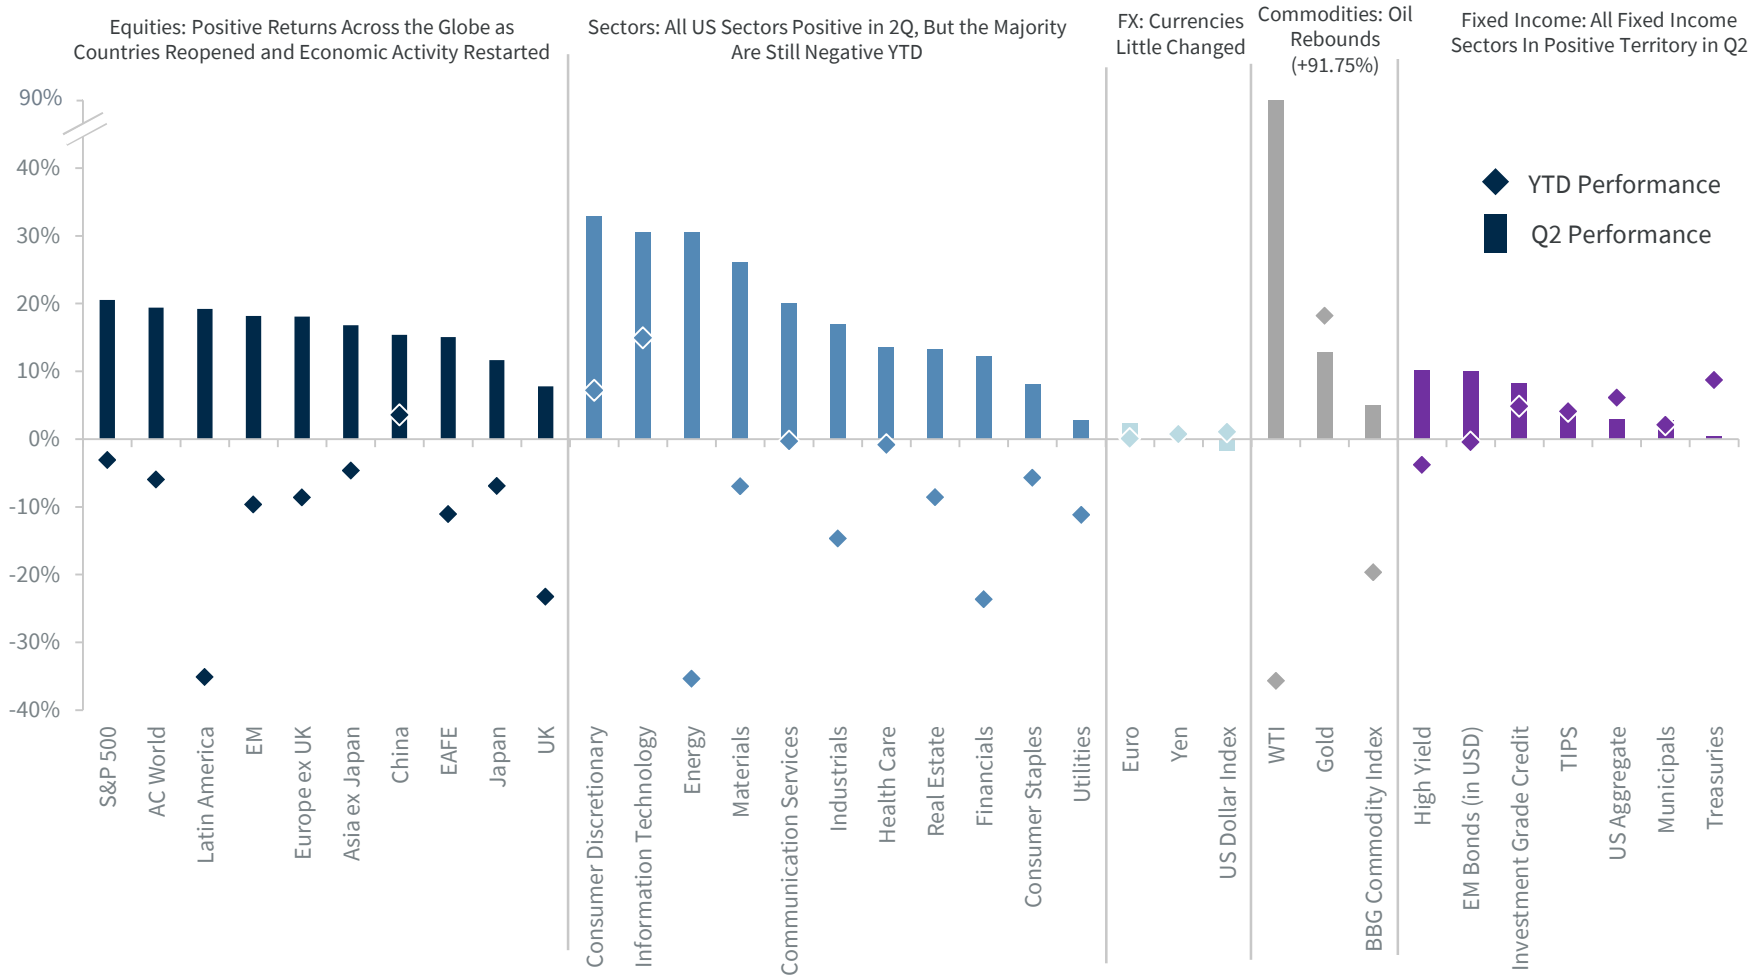
Returns By Asset Class | Q2 and Year to Date

Returns by Asset Class



Data as of June 30, 2020. All international equity indices are MSCI indices and in USD. Diamonds represent year-to-date total returns and bars represent Q2 total returns.

Global Economy | Surge in Cases Threatens Recovery

Global Economy | Recent Trends

- As states have rolled back social distancing measures, the **US economy has likely exited the sharpest and fastest recession in history**. This is evident as economic data (improving consumer confidence, sharp rebound in ISM surveys) and activity metrics (e.g., TSA screenings, restaurant bookings) continue to suggest we are past the bottom in economic growth and that economic activity is recovering. However, **activity metrics remain well-off pre-Covid levels** and the recent uptick in national COVID-19 cases threatens the recovery in economic growth.
- The **US job market has improved in recent weeks** with the unemployment rate falling more than expected to 11.1%. On the other hand, jobless claims fell more slowly, suggesting weakness in the labor market even as many furloughed workers returned to their jobs.
- After already passing over $2.5 trillion in stimulus, **Congress is legislating an additional round of fiscal relief**, which will likely be focused on state and local aid and include an extension to both the federal unemployment insurance booster and the PPP program.
- In its updated World Economic Outlook, the **IMF lowered its forecast for 2020 global growth to -4.9%**, down from the -3.0% estimate last quarter, but expects growth to pick up in 2021.
- **Overseas, economic activity also deteriorated sharply** with some countries administering massive financial relief programs, in some cases north of 50% of GDP.

Global Economy | 2020 Outlook

- While the decline in US economic activity has likely bottomed, given the scale of the shutdown in economic activity due to social distancing measures and impact on consumer spending (~70% of US GDP), **the US likely posted the worst quarterly decline on record** (forecast of -35% QoQ ann.) **in 2Q20**.
- The **US economy is likely to rebound in the third quarter** as social distancing measures wane and the economy returns to more normal activity. Over the medium to longer term, **aggressive actions from policymakers (both from a fiscal and monetary perspective) should be supportive of economic growth**. We expect policymarkers will continue to act proactively if growth deteriorates further and more action is needed.
- While we expect economic growth to recover sharply in both 2H20 and 2021, **we do not anticipate GDP to return to pre-Covid levels until 4Q 2021 at the earliest.**
- T**he threat of COVID-19 (evident by the recent uptick in cases nationally) remains a key risk** for the trajectory of economic growth into year end until an effective vaccine is discovered. While nation-wide lockdowns are unlikely to be repeated, a continued uptick in cases will likely weigh on consumer sentiment and thereby hamper consumer spending.

Bottoming in Economic Growth

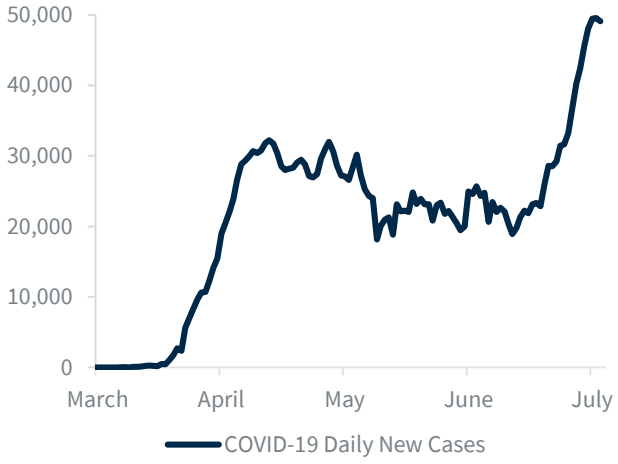
COVID-19 New Daily Cases



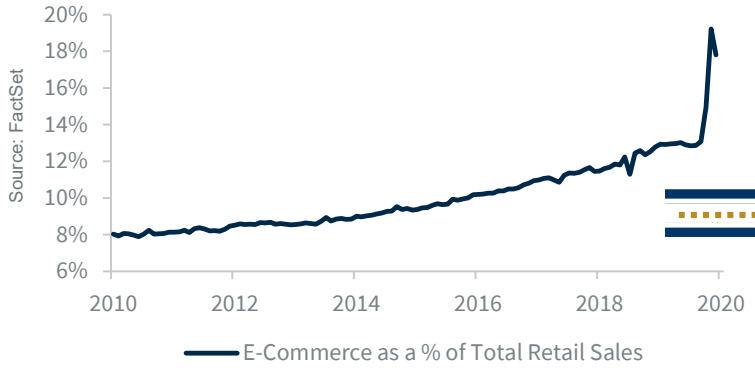
Source: Investment Strategy

The 'K' Economy | The Road to Economic Recovery

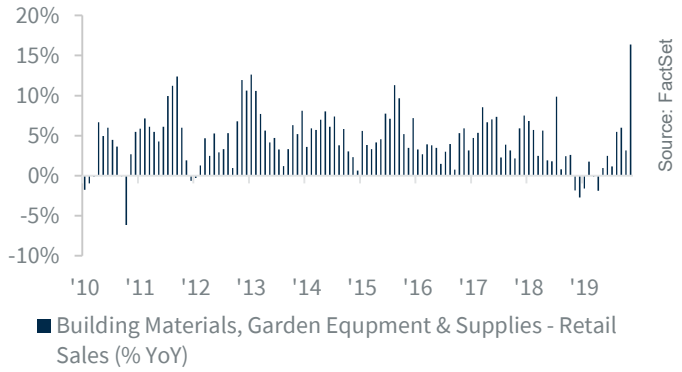
THE 'K' ECONOMY CONTINUES TO DEPICT THE RECOVERY

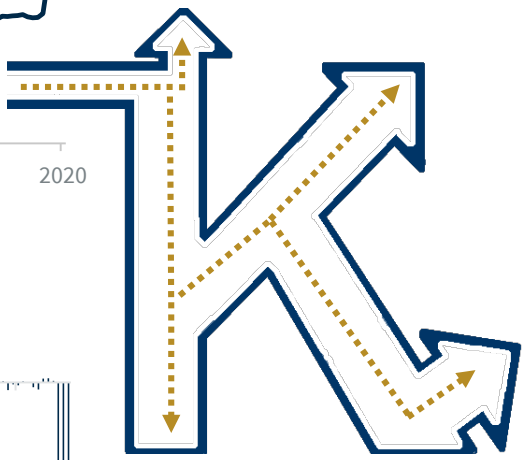
- An area that has not been negatively impacted by the lockdowns has been e-commerce, as sales in this category have reached nearly 20% of total retail sales. On other hand, clothing has been severely impacted, with sales still down more than 60% on a year-over-year basis. On the top right, building material and garden equipment sales are up more than 16% since this time last year. Lastly, until the majority of the workers who lost their jobs during the prolonged shutdowns return to work, spending for 'big ticket' items such as cars will likely be suppressed.

E-Commerce Sales



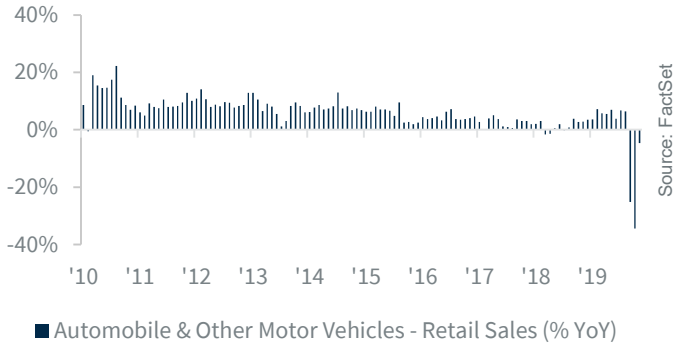
Building Material & Garden Equipment





Clothing and Clothing Accessories

Automobile & Motor Vehicle Purchases



Equities | Rally Continues, But Risk of Pullback is Elevated

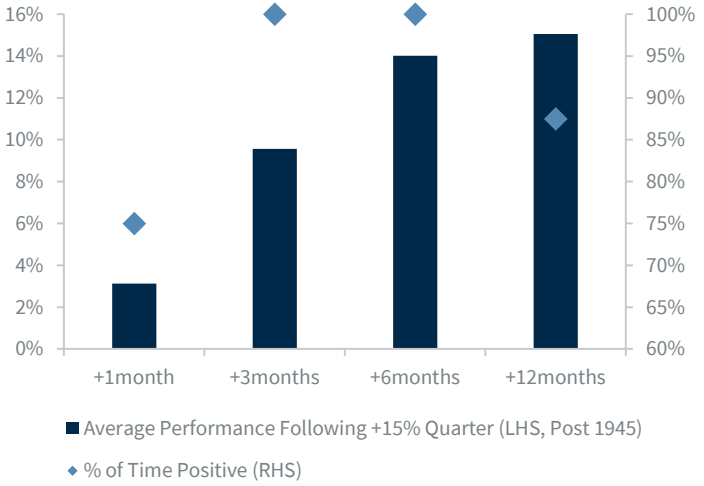
Global Equities | Recent Trends

- After declining by more than 30% off of recent highs in recent months as a result of COVID-19, US stocks had **the best quarter in over 20 years** with the S&P 500 up 20.5% QoQ.
- The rally was driven by optimism as states reopened, thereby leading to a bottoming and rebound in economic activity, and as a phase four fiscal stimulus package remains likely.
- The expectations of an economic rebound in the 2H20 **led all sectors higher for the quarter,** with Consumer Discretionary (+30.5%) and Technology (+32.9%) leading the way.
- Strong quarters typically lead to further strength, as following the eight quarters of 15%+ returns dating back to 1945, the S&P 500 was higher on average over the next 6-12 months.
- Earnings growth is likely to accelerate along with the rebound in economic activity, and is expected to rise 29% in 2021. In addition, the amount of cash on the sidelines remains near record highs at ~$4.8T, which is supportive of equity markets going forward.
- Despite the decrease in volatility, there is an **elevated risk of a pullback in the near term** as a result of multi-year high valuations, uncertainty surrounding a potential vaccine, increasing COVID-19 cases in the US, political uncertainty as the probability of a Democratic sweep is increasing, and the typical seasonal volatility over the summer months could have a negative impact on the equity markets in the near term.

Global Equities | 12-Month Outlook

- While the trajectory for equities in the near term remains cloudy due to coronavirus uncertainty, **we believe that equities will be higher over the next 12 to 24 months.** Longer term, equities will be supported by the rebound in 2H20 economic growth and increased fiscal and monetary stimulus. We have a year-end S&P 500 price target of 3,111.
- **We remain biased to select cyclical sectors** as they should benefit from improving economic growth, stronger earnings growth, and rising earnings growth. In addition to our previous three favorite sectors (Technology, Communication Services, and Health Care) we added Consumer Discretionary to our list, as this sector should benefit from additional fiscal stimulus, online shopping, and rising consumer confidence.
- **From a market cap perspective, we favor large-cap US equities relative to small-cap US equities** as large cap has more resilient earnings relative to small cap, is less leveraged in aggregate, has stronger and more stable dividends and greater exposure to Tech.
- **We remain constructive longer term on global equities** due to the expected turnaround in second half global economic growth, but would prefer US to global equities at this time due to favorable sector exposure in the US and more resilient US economic growth.

Strong Quarters Typically Lead to Further Strength



Valuations at Elevated Levels

Fixed Income | Treasurys Range Bound; Credit Sectors Rally

Global Bonds | Recent Trends

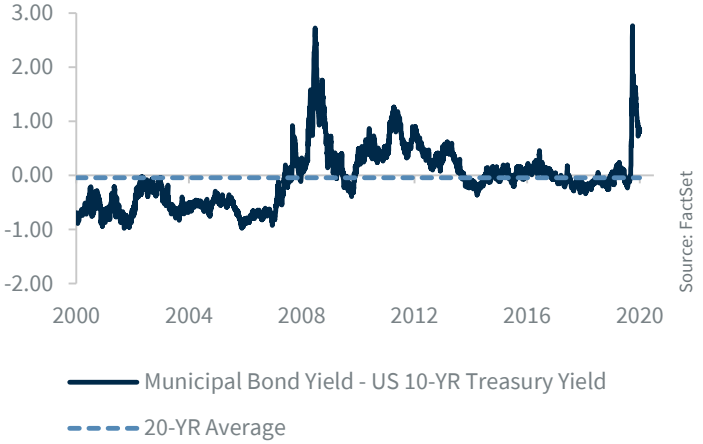
- After falling sharply to all-time lows during the month of March, **Treasury yields stabilized and have been range bound near record lows for the past two months.**
- Pressuring yields to the downside have been the continued unprecedented levels of easing from global central banks, muted inflation and elevated levels of foreign demand; however, yields were supported by the sharp rally in risk assets, the rebound in economic activity (with expectations for further recovery in 2H20 and 2021) and elevated issuance.
- **Spreads between short-term and long-term Treasurys** have fallen from their March highs, **but remain elevated** relative to 2019 level (full-year average of +17bps). The spread between the yields on 10-year and 2-year Treasurys ended the month at 51 basis points.
- **Corporate bond spreads narrowed sharply in 2Q20** on the back of improving economic activity (and expectations for a continued rebound in 2H20 and 2021), purchases of corporate bonds from the Fed and the risk asset rally. High-yield spreads remain more elevated relative to investment grade due to their exposure to Energy and retail. **Municipal spreads remain elevated**, as COVID-19 impacts continue to hamper state budgets. The potential for federal fiscal relief for states in a phase four package would be supportive for municipal bonds.

Global Bonds | 2020 Outlook

- As the market is pricing in a second half recovery in economic growth, **we expect the 10-year Treasury yield to rise off of historic lows to 1%**. However, **we expect the rise in yields to be limited** due to record low inflation expectations, vulnerable economic growth prospects, continued buying from global central banks, increased demand from foreign investors (due to depressed foreign sovereign yields) and aging demographics.
- Given our expectation for a modest rise in longer-duration interest rates while the Fed is likely to leave policy rates unchanged for the foreseeable future (keeping shorter-term rates low), **we recommend a shorter than benchmark duration for bond portfolios.**
- From a credit perspective, we believe investors should consider **'buying what the Fed is buying.'** As a result of the expansion of eligible purchases by the Fed to include investment grade and municipal bonds, increased demand as a result of Fed buying should lead to a narrowing of spreads and support prices within these two sectors.
- **We are cautious on high yield** as rising defaults due to the COVID-19-induced recession (we forecast default rates could rise as high as 10%), increased supply due to rising fallen angels and elevated exposure to Energy will likely weigh on the sector. Selectivity is important.

Range Bound Treasury Yield

Municipal Spreads Remain Elevated



Commodities & Currencies | Oil Rally Continues; Dollar Weakens

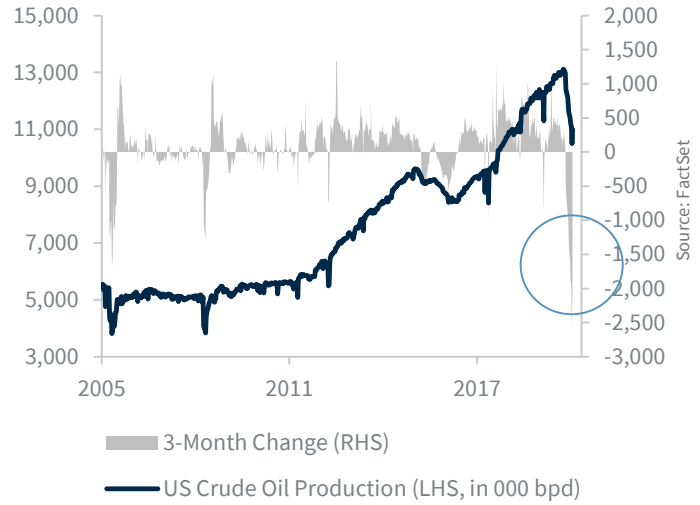
Commodities & Currencies | Recent Trends

- **After its best monthly return on record in May (+88%)**, crude oil prices continued to move higher in June as WTI oil prices have bounced sharply off of the all-time low – negative $37 per barrel – that was set in mid-April.
- Three factors that have driven the sharp rally in crude oil are: First, the **OPEC+ Russia deal on production cuts has been in effect since May.** Second, **price-related production shut-ins in the US (the US has posted the largest three month decline in crude oil production on record) and elsewhere** decreased the overall supply of crude oil. Third, and most importantly, the COVID-related disruptions in transportation and economic activity have begun to subside and demand is recovering. In fact, while US gasoline demand remains down 21% from pre-Covid-19 levels, it is now up 69% off of the COVID-driven lows.
- Despite the recent risk asset rally, **gold spiked to over $1,800/oz for the first time since September 2011** as easing from global central banks and continued uncertainty from COVID-19 supports the precious metal given its role as a diversifier amidst elevated volatility.
- Following significant volatility in March (the dollar rose to the highest level in three years), the **US dollar declined for the third straight month in June** as markets digested the impacts of monetary policy, stimulus efforts, and widening government deficits on the currency.

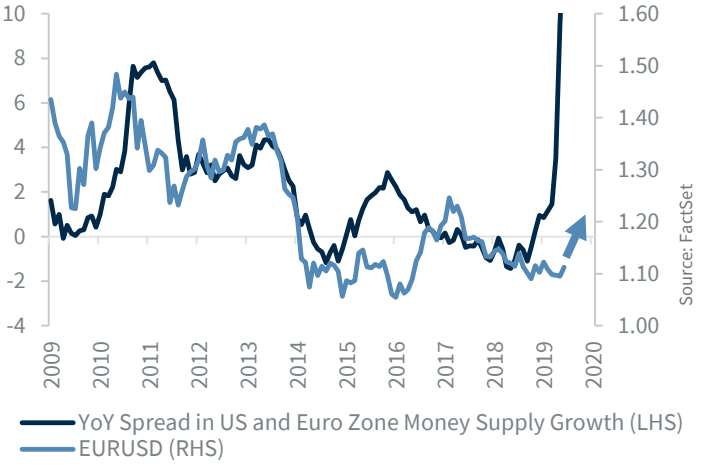
Commodities & Currencies | 2020 Outlook

- Longer term, as demand rebounds as social distancing measures are scaled back and economic activity increases in the second half of the year, **crude oil likely will be supported through year end** (2020 WTI target: **$38/barrel**). In addition, the reduction in production from US oil producers (current prices below US breakeven levels) and the OPEC+ Russia deal should lead to decreased supply and support crude oil prices.
- As volatility remains elevated and the threat of COVID-19 remains a risk due to the current lack of a vaccine and cases continue to increase nationally, **demand for gold will remain a hedge against a second-wave virus-induced economic decline in the near term.** However, once the global economy stabilizes and a therapeutic or vaccine for the virus is found (likely by year-end 2020), we believe that gold will come under pressure.
- Similar to gold, the dollar will remain supported in the near term if risk-off sentiment materializes. However, as the investing environment improves as COVID-19 fears fade (largely as a result of the discovery of a vaccine or therapeutic), **fundamental factors that increase the supply of dollars globally like increased deficit financing (due to the fiscal stimulus measures) and quantitative easing should lead to a weaker dollar.**

US Oil Production Declines



US Dollar Weakens With Rising Money Supply



Summary | Views and Key 2020 Year-End Targets

1 ECONOMY

2020 US GDP: -5.3%

The US economy experienced its deepest and shortest recession ever due to the COVID-19 pandemic. In fact, the economy is likely to experience a robust rebound during the second half of the year, especially if policymakers continue to exhibit a "by any means necessary" approach to defeat this virus.

2 BOND MARKET

2020 10-Year Treasury: +1.00%

We forecast that the 10-year Treasury yield will be 1.00% by year end, supported by an economic recovery in the second half of the year. Given the substantial Energy sector and brick and mortar retailer exposure of high-yield bonds, we maintain our preference for investment-grade and municipal bonds given the Fed's purchases of these sectors.

3 EQUITIES

2020 S&P 500: 3,111

Our expectation for a rebound in 2H20 economic activity and fiscal and monetary stimulus should support equities. However, with valuations at the highest level since 2001, the risk of a pullback remains elevated. Use pullbacks as buying opportunities within our favorite sectors (Info Tech, Health Care, Comm Services, and Cons Disc).

4 DOLLAR DIRECTION

2020 EUR/USD: 1.15

Our expectation is that aggressive monetary policy and a burgeoning budget deficit (~$3 trillion) will cause the dollar to modestly weaken throughout the year. Separately, easy monetary policy from the Federal Reserve will likely add additional pressure to the value of the dollar, weakening it relative to other currencies.

5 OIL

2020 WTI: $38/bbl

We expect crude oil to be range bound around our year-end target of $38/bbl as positive factors such as improving demand as a result of the rebound in economic activity support prices higher. However, a recovery in US oil production (as prices return to breakeven levels) will likely limit any upside in prices.

6 ELEVATED VOLATILITY

Volatility: ↑

Given the unpredictable trajectory of the COVID-19 pandemic, and elevated political (2020 election) and geopolitical risk, we expect that volatility will remain heightened throughout the remainder of 2020 as the global economy finds its footing and returns to some semblance of normality.

DISCLOSURES

INTERNATIONAL INVESTING | International investing involves additional risks such as currency fluctuations, differing financial accounting standards, and possible political and economic instability. These risks are greater in emerging markets.

SECTORS | Sector investments are companies engaged in business related to a specific economic sector and are presented herein for illustrative purposes only and should not be considered as the sole basis for an investment decision. Sectors are subject to fierce competition and their products and services may be subject to rapid obsolescence. There are additional risks associated with investing in an individual sector, including limited diversification.

OIL | Investing in oil involves special risks, including the potential adverse effects of state and federal regulation and may not be suitable for all investors.

CURRENCIES | Currencies investing are generally considered speculative because of the significant potential for investment loss. Their markets are likely to be volatile and there may be sharp price fluctuations even during periods when prices overall are rising.

GOLD | Gold is subject to the special risks associated with investing in precious metals, including but not limited to: price may be subject to wide fluctuation; the market is relatively limited; the sources are concentrated in countries that have the potential for instability; and the market is unregulated.

FIXED INCOME | Fixed-income securities (or “bonds”) are exposed to various risks including but not limited to credit (risk of default of principal and interest payments), market and liquidity, interest rate, reinvestment, legislative (changes to the tax code), and call risks. There is an inverse relationship between interest rate movements and fixed income prices. Generally, when interest rates rise, fixed income prices fall and when interest rates fall, fixed income prices generally rise.

US TREASURIES | US Treasury securities are guaranteed by the US government and, if held to maturity, generally offer a fixed rate of return and guaranteed principal value.

US DOLLAR | The US Dollar Index is an index (or measure) of the value of the United States dollar relative to a basket of foreign currencies,[1] often referred to as a basket of U.S. trade partners' currencies.[2] The Index goes up when the US dollar gains "strength" (value) when compared to other currencies.

DEFINITIONS

AGGREGATE BOND | **Bloomberg Barclays US Agg Bond Total Return Index:** The index is a measure of the investment grade, fixed-rate, taxable bond market of roughly 6,000 SEC-registered securities with intermediate maturities averaging approximately 10 years. The index includes bonds from the Treasury, Government-Related, Corporate, MBS, ABS, and CMBS sectors.

HIGH YIELD | **Bloomberg Barclays US Corporate High Yield Total Return Index:** The index measures the USD-denominated, high yield, fixed-rate corporate bond market. Securities are classified as high yield if the middle rating of Moody’s, Fitch and S&P is Ba1/BB+/BB+ or below.

CREDIT | **Bloomberg Barclays US Credit Total Return Index:** The index measures the investment grade, US dollar-denominated, fixed-rate, taxable corporate and government related bond markets. It is composed of the US Corporate Index and a non-corporate component that includes foreign agencies, sovereigns, supranationals and local authorities.

MUNICIPAL | **Bloomberg Barclays Municipal Total Return Index:** The index is a measure of the long-term tax-exempt bond market with securities of investment grade (rated at least Baa by Moody’s Investors Service and BBB by Standard and Poor’s). This index has four main sectors: state and local general obligation bonds, revenue bonds, insured bonds, and prerefunded bonds.

BBG COMMODITY INDEX | Bloomberg Commodity Index is calculated on an excess return basis and reflects commodity futures price movements.

S&P 500 | The **S&P 500 Total Return Index:** The index is widely regarded as the best single gauge of large-cap U.S. equities. There is over USD 7.8 trillion benchmarked to the index, with index assets comprising approximately USD 2.2 trillion of this total. The index includes 500 leading companies and captures approximately 80% coverage of available market capitalization.

EMERGING MARKETS EASTERN EUROPE | **MSCI EM Eastern Europe Net Return Index:** The index captures large- and mid-cap representation across four Emerging Markets (EM) countries in Eastern Europe. With 50 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each country.

ASIA EX JAPAN INDEX | **The MSCI AC Asia ex Japan** Index captures large and mid cap representation across 2 of 3 Developed Markets (DM) countries* (excluding Japan) and 9 Emerging Markets (EM) countries in Asia. With 983 constituents, the index covers approximately 85% of the free float adjusted market capitalization in each country.

AC WORLD INDEX | **The MSCI AC World** Index is a market capitalization weighted index designed to provide a broad measure of equity-market performance throughout the world. The MSCI ACWI is maintained by Morgan Stanley Capital International (MSCI) and is comprised of stocks from 23 developed countries and 24 emerging markets.

EMERGING MARKETS LATIN AMERICA | **MSCI EM Latin America Net Return Index:** The index captures large- and mid-cap representation across five Emerging Markets (EM) countries in Latin America. With 116 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each country.

EMERGING MARKETS | **MSCI Emerging Markets Net Return Index:** This index consists of 23 countries representing 10% of world market capitalization. The index is available for a number of regions, market segments/sizes and covers approximately 85% of the free float-adjusted market capitalization in each of the 23 countries.

JAPAN | **MSCI Japan Net Return Index:** The index is designed to measure the performance of the large and mid cap segments of the Japanese market. With 319 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in Japan.

EUROPE EX UK | **MSCI Europe Ex UK Net Return Index:** The index captures large and mid cap representation across 14 Developed Markets (DM) countries in Europe. With 337 constituents, the index covers approximately 85% of the free float-adjusted market capitalization across European Developed Markets excluding the UK.

MSCI EAFE | The **MSCI EAFE** (Europe, Australasia, and Far East) is a free float-adjusted market capitalization index that is designed to measure developed market equity performance, excluding the United States & Canada. The EAFE consists of the country indices of 22 developed nations.

IMPORTANT DISCLOSURES

This information is provided for your convenience, but should not be used as a substitute for your account's monthly statements and trade confirmations. Material is provided for informational purposes only and does not constitute a recommendation. It has been gathered in a manner which we believe to be reliable, but accuracy is not guaranteed. It is not intended as tax advice. Past performance does not guarantee future results.

Diversification and strategic asset allocation does not ensure a profit or protect against a loss. No investment strategy can guarantee success. Investments are subject to market risk, including possible loss of principal.

Investing in small and mid-cap stocks are riskier investments which include price volatility, less liquidity and the threat of competition. International investing involves additional risks such as currency fluctuations, differing financial accounting standards and possible political and economic instability. These risks are greater in emerging markets. Alternative investment strategies involve greater risks and are only appropriate for the most sophisticated, knowledgeable and wealthiest of investors. Managed futures involve specific risks that maybe greater than those associated with traditional investments and may be offered only to clients who meet specific suitability requirements, including minimum net worth tests. You should consider the special risks with alternative investments including limited liquidity, tax considerations, incentive fee structures, potentially speculative investment strategies, and different regulatory and reporting requirements. Commodities are generally considered speculative because of the significant potential for investment loss. REITs are financial vehicles that pool investors' capital to purchase or finance real estate. REITs involve risks such as refinancing, economic conditions in the real estate industry, changes in property values and dependency on real estate management.

Alternative investments such as Hedge Funds involve substantial risks that may be greater than those associated with traditional investments and are not suitable for all investors. They may be offered only to clients who meet specific suitability requirements, including minimum-net-worth tests. These risks include, but are not limited to, limited liquidity, tax considerations, incentive fee structures, potentially speculative investment strategies, and different regulatory and reporting requirements. Investors should only invest in hedge funds if they do not require a liquid investment and can bear the risk of substantial losses. There is no assurance that any investment will meet its investment objectives or that substantial losses will be avoided. Investors should carefully review any offering materials or prospectuses prior to investing. A Non marketable security is typically a debt security, that is difficult to buy or sell due to the fact that they are not traded on any normal, major secondary market exchanges. Such securities, if traded in any secondary market, are usually only bought and sold through private transactions or in an over-the-counter (OTC) market. For the holder of a non-marketable security, finding a buyer can be difficult, and some non-marketable securities cannot be resold at all because government regulations prohibit any resale.

Performance: Performance results are annualized for time periods greater than one year and include all cash and cash equivalents, realized and unrealized capital gains and losses, and dividends, interest and income. The investment results depicted herein represent historical performance. As a result of recent market activity, current performance may vary from the figures shown. Please contact your Financial Advisor for up to date performance information.

Indices: Raymond James reserve the right to change the indices at any time. Benchmark indices and blends included in this material are for informational purposes only, are provided solely as a comparison tool and may not reflect the underlying composition and/or investment objective(s) associated with the account(s). In some circumstances, the benchmark index may not be an appropriate benchmark for use with the specific composite portfolio. For instance, an index may not take into consideration certain changes that may have occurred in the portfolio since the inception of the account(s), (e.g., changes from a brokerage to an advisory account or from one advisory program to another, asset class changes, or index changes for individual managers). The volatility of the index used for comparison may be materially different from that of the performance shown. Indices are unmanaged and not available for direct investment. Index returns do not take into account fees or other charges. Such fees and charges would reduce performance. Please see the Benchmark Definitions section of this material for additional information on the indices used for comparison.

Performance Inception Month End: Performance Inception Month End refers to performance calculated from the end of the month in which the accounts became eligible for performance. Calculating performance from the Performance Inception Month End allows for a comparison to be made to appropriate benchmarks. Performance Inception Month End does not necessarily correspond to the account opening date.

Realized/Unrealized Gain/Loss: The gain and loss information is provided for informational purposes only, may not be complete, is not a substitute 1099 form (or any other appropriate tax form), and should not be used for tax planning or preparation. Gain and loss values are estimates and should be independently verified. We are not responsible for any gain and loss information provided by you or another financial institution. You are responsible for ensuring the accuracy of such information.

Projected 12 Month Income: Projected Next 12 Months income includes cash income such as interest and cash dividends, based on current yields and may include income from Raymond James & Associates, Inc. and externally held accounts where data is available. These are projections based on historical data and the actual income may be lower or higher than the projections. Raymond James & Associates, Inc. member New York Stock Exchange/SIPC. Investment advisory services offered through Raymond James & Associates.

Investors should consider the investment objectives, risks, charges and expenses of an investment company carefully before investing. The prospectus contains this and other information and should be read carefully before investing. The prospectus is available from your investment professional.

Index Descriptions

It is not possible to invest directly in an index.

31 Day T-Bills – The average discount rate at which the US government is issuing short term-debt.
BBgBarc Municipal Bond: 1-10 Year Blend - A component of the BBgBarc Capital Municipal Bond Index with municipal bonds in the 1-10 year blend (1-12) maturity range.
BBgBarc 1-5 Government/Credit - BBgBarc 1-5 Year Government/Credit Index: Includes all medium and larger issues of U.S. government, investment-grade corporate, and investment-grade international dollar-denominated bonds that have maturities of between 1 and 5 years and are publicly issued.
BBgBarc 1-5 Year Government - An inclusion of securities within the BBgBarc Government Index that have a maturity range from 1 up to (but not including) 5 years.
BBgBarc 1-5 Year Treasury - The 1-5 year component of the BBgBarc Capital U.S. Treasury Index with securities in the maturity range from 1 year up to (but not including) 5 years.
BBgBarc Credit 1-3 Year - BBgBarc 1-5 Year Credit Index: Includes all medium and larger issues of U.S. government, investment-grade corporate, and investment-grade international dollar denominated bonds that have maturities of between 1 and 3 years and are publicly issued.
BBgBarc U.S. Government/Credit (BCGC) - The Government/Credit component of the U.S. Aggregate. The government portion includes treasuries (public obligations of the U.S. Treasury that have remaining maturities of more than one year) and agencies (publicly issued debt of the U.S. Government agencies, quasi-federal corporations, and corporate or foreign debt guaranteed by the U.S. Government). The credit portion includes publicly issued U.S. corporate and foreign debentures and secured notes that meet specified maturity, liquidity, and quality requirements. Must be a publicly issued, dollar-denominated and non-convertible, U.S. Government or Investment Grade Credit security. Must be rated investment-grade (Baa3/BBB- or higher) by at least two of the following rating agencies: Moody's, S&P, Fitch; regardless of call features, have at least one year to final maturity, and have an outstanding par value amount of at least $250 million.
BBgBarc Intermediate U.S. Government/Credit (BCIGC) - The intermediate component of the BBgBarc Capital Government/Credit Index with securities in the maturity range from 1 up to (but not including) 10 years.
BBgBarc Global Aggregate - The index is designed to be a broad based measure of the global investment-grade, fixed rate, fixed income corporate markets. The major components of this index are the US Aggregate, Pan-European Aggregate, and the Asian-Pacific Aggregate Indices. The index also includes Eurodollar and Euro-Yen corporate bonds, Canadian government, agency and corporate securities.
BBgBarc Global Aggregate Intermediate - The intermediate component of the BBgBarc Global Aggregate index with securities in the maturity range from 1 up to (but not including) 10 years.
BBgBarc U.S. Government: Intermediate - The intermediate component of the BBgBarc Capital U.S. Government Index with securities in the maturity range from 1 up to (but not including) 10 years.
BBgBarc U.S. Government: Long - The long component of the BBgBarc Capital U.S. Government Index with securities in the maturity range from 10 years or more.
BBgBarc LT Muni - A component of the BBgBarc Capital Municipal Bond Index with municipal bonds with a maturity range greater than 20 years.
BBgBarc Municipal Bond Index - A rules-based, market-value weighted index that is engineered for the long-term tax-exempt bond market. Bonds must be rated investment-grade (Baaa3/BBB- or higher) by at least two of the following rating agencies: Moody's, S&P, Fitch. The bonds must be fixed rate, have a dated-date after December 31, 1990, have an outstanding par value of at least $7million, and be issued as part of a transaction of at least $75 million. The four main sectors of the index are: general obligation bonds, revenue bonds, insured bonds (including all insured bonds with a Aaa/AAA rating), and prefunded bonds. Remarketed issues, taxable municipal bonds, floating rate bonds, and derivatives, are excluded from the benchmark.
BBgBarc U.S. Treasury - A component of the U.S. Government Index. Must be publicly issued, dollar-denominated and non-convertible, fixed rate (although it may carry a coupon that steps up or changes according to a predetermined schedule) U.S. Treasury security. Must be rated investment-grade (Baa3/BBB- or higher) by at least two of the following rating agencies: Moody's, S&P, Fitch; regardless of call features, have at least one year to final maturity, and have an outstanding par value amount of at least $250 million.
BBgBarc U.S. Treasury: Intermediate (BCIT) - The intermediate component of the BBgBarc Capital U.S. Treasury Index with securities in the maturity range from 1 year (but not including) 10 years.
BBgBarc U.S. Treasury: Long - The long component of the BBgBarc Capital U.S. Treasury Index with securities in the maturity range from 10 years or more.
BBgBarc U.S. Treasury: U.S. TIPS - Comprised of Inflation-Protection securities issued by the U.S. Treasury. Must be a fixed rate, publicly issued U.S. Treasury Inflation Note that is dollar-denominated and non-convertible. Must be rated investment-grade (Baa3/BBB- or higher) by at least two of the following rating agencies: Moody's, S&P, Fitch; have at least one year to final maturity, and have an outstanding par value amount of at least $250 million.
BBgBarc High Yield Composite BB - A component of the BBgBarc U.S. Corporate High Yield Bond Index with bonds in the BB or better.
FTSE 1-3 Year U.S. Treasury - Component of the FTSE U.S. Treasury that measures total returns for U.S. Treasuries with a maturity between 1-3 years.
FTSE 3 Month U.S. Treasury Bill - This index measures monthly return equivalents of yield averages that are not marked to market. The Three-Month Treasury Bill Indices consist of the last three three-month Treasury bill issues.
FTSE World Government Bond - FTSE World Government Bond Index (WGBI), includes the most significant and liquid government bond markets globally that carry at least an investment grade rating.
FTSE World Government Bond ex US – Similar to the FTSE World Government Bond Index (WGBI), includes the most significant and liquid government bond markets globally that carry at least an investment grade rating but excludes bonds from the United States.

Consumer Price Index - All Urban Consumers (CPI-U) - As an economic indicator, and as the most widely used measure of inflation, the Consumer Price Index (CPI) is an indicator of the effectiveness of government policy, and as a guide in making economic decisions for business executives, labor leaders, and other private citizens. Published on a monthly basis by the U.S. Bureau of Labor Statistics (BLS), the CPI is a measure of the average change in prices over time of goods and services purchased by households. CPI for All Urban Consumers (CPI-U) encompasses approximately 87 percent of the total U.S. population which includes, in addition to wage earner and clerical worker households, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retires and others not in the labor force.

Dow Jones UBS Commodity - Provides a diversified representation of commodity markets as an asset class. The index is comprised of exchange-traded futures on physical commodities; representing 19 commodities which are weighted for economic significance and market liquidity. To promote diversification, weighting restrictions are placed on individual commodities and commodity groups.

FTSE NAREIT U.S. Real Estate - All REITs - The index is designed to represent a comprehensive performance of publicly traded REITs which covers the commercial real estate space across the US economy, offering exposure to all investment and property sectors. It is not free float adjusted, and constituents are not required to meet minimum size and liquidity criteria.

HFRI Equity Hedge Fund Index - The index is designed to represent strategies which maintain positions both long and short in primarily equity and equity derivative securities. A wide variety of investment processes can be employed to arrive at an investment decision, including both quantitative and fundamental techniques; strategies can be broadly diversified or narrowly focused on specific sectors and can range broadly in terms of levels of net exposure, leverage employed, holding period, concentrations of market capitalizations and valuation ranges of typical portfolios. Equity Hedge managers would typically maintain at least 50% exposure to, and may in some cases be entirely invested in, equities - both long and short.

HFRI (Hedge Fund Research, Inc.) Fund of Funds Composite Index (1) - The index only contains fund of funds, which invest with multiple managers through funds or managed accounts. It is an equalweighted index, which includes over 650 domestic and offshore funds that have at least $50 Million under management or have been actively trading for at least 12 months. All funds report assets in US Dollar, and Net of All Fees returns which are on a monthly basis.

MSCI ACWI - A free float-adjusted market capitalization index that is designed to measure the equity market performance of both developed and emerging markets. This "All Country World Index" reflects performance across the Americas, Europe & the Middle East, Africa, Asia, and the Pacific.

MSCI EAFE - A free float-adjusted market capitalization index that is designed to measure the equity market performance of developed markets, excluding the U.S. and Canada. As of December 31, 2010 the MSCI EAFE Index consists of 22 developed market country indices: Australia, Austria, Belgium, Denmark, Finland, France, Germany, Greece, Hong Kong, Ireland, Israel, Italy, Japan, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, and the United Kingdom.

MSCI EAFE Value -Net Dividend - A free float-adjusted market capitalization index that is designed to measure the equity market performance of developed markets, excluding the U.S. and Canada. Value attribute for index construction is defined using: book value to price ratio, 12-months forward earnings to price ratio, and dividend yield. Net total return indices reinvest dividends after the deduction of withholding taxes, using (for international indices) a tax rate applicable to non-resident institutional investors who do not benefit from double taxation treaties.

MSCI EAFE Growth -Net Dividend - A free float-adjusted market capitalization index that is designed to measure the equity market performance of developed markets, excluding the U.S. and Canada. Growth attribute for index construction is defined using: long-term forward earnings per share (EPS) growth rate, short-term forward EPS growth rate, current internal growth rate, long-term historical EPS growth trend, long-term historical sales per share growth trend. Net total return indices reinvest dividends after the deduction of withholding taxes, using (for international indices) a tax rate applicable to non-resident institutional investors who do not benefit from double taxation treaties.

MSCI Emerging Markets - A free float-adjusted market capitalization index that is designed to measure equity market performance of emerging markets. As of December 31, 2010, the MSCI Emerging Markets Index consists of the following 21 emerging market country indices: Brazil, Chile, China, Colombia, Czech Republic, Egypt, Hungary, India, Indonesia, Korea, Malaysia, Mexico, Morocco, Peru, Philippines, Poland, Russia, South Africa, Taiwan, Thailand, and Turkey.

MSCI World - A free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed markets. As of December 31, 2010, the MSCI World Index consists of the following 24 developed market country indices: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Greece, Hong Kong, Ireland, Israel, Italy, Japan, Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, the United Kingdom, and the United States.

NCREIF - The index is a quarterly time series composite total rate of return measure of investment performance of a very large pool of individual commercial real estate properties acquired in the private market for investment purposes only. Information on this index is available at ncreif.com.

Russell 1000 - Based on a combination of their market cap and current index membership, this index is comprised of approximately 1,000 of the largest securities from the Russell 3000. Representing approximately 92% of the Russell 3000, the index is created to provide a full and unbiased indicator of the large cap segment.

Russell 1000 Growth - Measures the performance of those Russell 1000 companies with higher price-to-book ratios and higher forecasted growth values.

Russell 1000 Value - Measures the performance of those Russell 1000 companies with lower price-to-book ratios and lower expected growth values.

Russell 2000 - Based on a combination of their market cap and current index membership, this index is comprised of approximately 2,000 of the smaller securities from the Russell 3000. Representing approximately 8% of the Russell 3000, the index is created to provide a full and unbiased indicator of the small cap segment.

Russell 2000 Growth - Measures the performance of those Russell 2000 companies with higher price-to-book ratios and higher forecasted growth values.

Russell 2000 Value - Measures the performance of those Russell 2000 companies with lower price-to-book ratios and lower expected growth values.

Russell 2500 - Based on a combination of their market cap and current index membership, this index is comprised of approximately 2,500 of the smallest securities from the Russell 3000. Measures the performance of the small to mid-cap (smid) segment of the U.S. equity universe.

Russell 2500 Growth - Measures the performance of those Russell 2500 companies with higher price-to-book ratios and higher forecasted growth values.

Russell 2500 Value - Measures the performance of those Russell 2500 companies with lower price-to-book ratios and lower expected growth values.

Russell 3000 - Representing approximately 98% of the investable U.S. equity market, the Russell 3000 index measures the performance of the largest 3,000 U.S. companies.

Russell 3000 Growth - Measures the performance of the broad growth segment of the U.S. equity universe which includes Russell 3000 companies with higher price-to-book ratios and higher forecasted growth values.

Russell 3000 Value - Measures the performance of the broad growth segment of the U.S. equity universe which includes Russell 3000 companies with lower price-to-book ratios and lower forecasted growth values.

Russell Midcap - A subset of the Russell 1000 index, the Russell Midcap index measures the performance of the mid-cap segment of the U.S. equity universe. Based on a combination of their market cap and current index membership, includes approximately 800 of the smallest securities which represents approximately 27% of the total market capitalization of the Russell 1000 companies. The index is created to provide a full and unbiased indicator of the mid-cap segment.

Russell Midcap Growth - Measures the performance of those Russell Mid-cap companies with higher price-to-book ratios and higher forecasted growth values.

Russell Midcap Value - Measures the performance of those Russell Mid-cap companies with lower price-to-book ratios and lower expected growth values.

Standard & Poor's 400 MidCap - Comprised of 400 domestic stocks that are chosen based upon market capitalization, liquidity and industry representation. The medium size US firms range with a market capitalization between $2 billion to $10 billion, and are between the S&P 500 Index and the S&P Smallcap 600 Index. It is a market-weighted index, which represents approximately 7% of the aggregate market value of US companies.

Standard & Poor's 500 - Representing approximately 75% of the investable US equity market, the S&P 500 measures changes in stock market conditions based on the average performance of 500 widely held common stocks. It is a market-weighted index calculated on a total return basis with dividend reinvested.

Stark 300 Trader - The Stark 300 index tracks the performance of the top-300 futures and forex traders. The index is calculated monthly using an equity-weighted formula to determine performance.

Index Abbreviations

Bloomberg Barclays – Abbreviated as BBgBarc and then a descriptor. For example BBgBarc US Aggregate TR is the Bloomberg Barclays United States Aggregate Total Return.

Statistics and General Definitions

Alpha – Measures how well a portfolio performed versus its benchmark after factoring in the amount of risk (as measured by beta) taken. Technically, alpha is the difference between the excess return of a portfolio and the excess return of the benchmark multiplied by beta. Excess return is simply the actual return minus the return of the risk-free asset, U.S. Treasury Bill. A positive alpha indicates the portfolio has performed better than the benchmark on a risk-adjusted basis.

Allocation Effect – Attributable to the asset allocation of the portfolio.

Annual Standard Deviation – A measure of variability in returns. The annual standard deviation measures the dispersion of annual returns around the average annualized return.

Annualized Return – A statistical technique whereby returns covering periods greater than one year are converted to cover a one year period.

Attribution – Analytical technique used to evaluate the performance of the portfolio relative to a benchmark. Attribution shows where value was added or subtracted as a result of the investment manager's decisions. The four main attribution effects are: Selection or Manager Effect, Allocation Effect, Currency Effect, and Interaction Effect.

Beta – A coefficient measuring a portfolio's relative volatility with respect to its market. Technically, beta is the covariance of a portfolio's return with the benchmark portfolio's return divided by the variance of the benchmark portfolio's return. Thus, a portfolio with a beta greater than 1.00, indicates the portfolio experienced greater volatility than the benchmark, whereas a portfolio with a beta less than 1.00, indicates the portfolio experienced less volatility than the benchmark.

Commitments – Also called Committed Capital. The amount an investor has agreed to contribute towards the funding of a venture capital fund. May be paid at one time or over a longer period.

Consumer Price Index – Measures the change in consumer prices, as determined by a monthly survey of the U.S. Bureau of Labor Statistics. CPI components include housing costs, food, transportation and electricity.

Correlation – Measures the strength of association between two variables. The value ranges between -1 and +1. The strongest linear relationship is indicated by a correlation of -1 or +1. The weakest linear relationship is indicated by a correlation of 0. Positive correlation means if one variable gets bigger, the other variable tends to get bigger. Negative correlation means that if one variable gets bigger, the other variable tends to get smaller.

Currency Effect –The effect that changes in currency exchange rates over time affect excess performance

Downside Capture Ratio – Measures investment manager's performance in down markets relative to a particular benchmark. A down-market is defined as those periods (months or quarters) in which market return is less than 0%.

Duration – A measure of the price sensitivity of a bond or bond portfolio to a change in interest rates.

Information Ratio – Describes the risk / reward trade-off of alpha and tracking error. Because the formula for calculating information ratio is Alpha divided by Tracking Error, the larger the information ratio, the more attractive the portfolio is from an overall risk return profile.

Interaction Effect – The portion that is not accounted for by the Selection/Manager Effect or Allocation effects.

R2 – Also called the coefficient of determination. On the detail page, R2 measures how much of the variation in the investment manager's returns can be explained by movements in the market (benchmark).

Sharpe Ratio – A risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe ratio, the better the manager's historical risk-adjusted performance.

Selection or Manager Effect – attributable to the invement manager's stock selection decisions

Tracking Error – A measure that describes the volatility of the expected excess return (alpha) achieved through active management. Since excess return can only be achieved through a portfolio that actively differs from the benchmark, the level of tracking error is indicative of how different the portfolio will perform relative to any given benchmark.

Upside Capture Ratio – Measures investment manager's performance in up markets relative to a particular benchmark. An up-market is defined as those periods (months or quarters) in which market return is greater than 0%.
